

Numeral & Shape Recognition Cards & Games

These flashcards are held in copyright by Perceptions Math. All rights reserved.

These cards may be reproduced for use by one teacher in one classroom.

In this flash card set, you will find *Base Ten Representational Picture Cards, Pictorial Counting Cards, 2-D and 3-D Shapes with Matching Word Cards, Numeral Cards from 0 to 100, Numerical Word Cards for One to Twenty and One Hundred, Ten Frame Cards, Dice Cards, Domino Cards, and Symbol (=, <, >, +, -) Cards.*

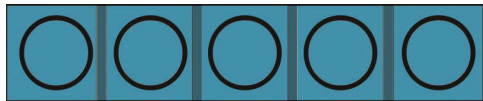

The file is divided into two sections to help when you print the cards. The first section has colored cards which should be run through a color printer, and the second section has black and white cards which can be run on any printer. The cards are all one-sided, so there is no need to duplex them.

*** Please Remember** to use card stock in order to have your cards last as long as possible. You will need to make additional copies of the *Symbol Cards* for use in your classroom, so please keep this in mind as you print.

Activities & Games:

- Your students may match any combination of the cards as they grow in their understanding of mathematics.
- You may play War with many of the sets.
- You may have your students place the numerical cards in order from smallest to largest or from largest to smallest.
- You may play a traditional game of Memory. (Depending on skill level, please choose two sets of cards to use making sure that no more than 5 to 15 matching card sets are out at a time. You do not want to overwhelm your students.)
- You may also begin skip-counting by 2s all the way through the 10s using the cards included.
- Feel free to come up with your own games for your students or allow them to be creative and make up games for themselves.

Should you have any questions, please feel free to contact us!
