

# Place Value Cards & Games

These flashcards are held in copyright by Perceptions Math. All rights reserved.  
These cards may be reproduced for use by one teacher in one classroom.

In these flash cards, you will find cards for single-digit to triple-digit numbers using *Base Ten Representations*, *Expanded Form*, *Standard Form*, and *Written Form* are all included. This will allow your students to match them in multiple ways. You will also find cards with the *Greater Than*, *Less Than*, and *Equals* symbols for your students to compare. Also, an *Odd / Even Placement Board* is included for when your students are ready!

The file is divided into two sections to help when you print the cards. The first section has colored cards which should be run through a color printer, and the second section has all black and white cards which can be run on any printer. The cards are all one-sided, so there is no need to duplex them. **\* Please Remember** to use card stock in order to have your cards last as long as possible. You will need to make additional copies of the Greater Than, Less Than, and Equal cards along with the Odd / Even Placement Board for use in your classroom.

## Activities & Games:

- Your students may match any combination of flashcards. At any time, you can add in the *Equals*, *Greater Than*, or *Less Than* symbols.
- You may play War with one set or any combination of the sets.
- You may have them place any of the sets (or combination of sets) in numerical order from smallest to largest or largest to smallest.
- You may play a traditional game of Memory. (Please choose two sets of cards to use making sure that no more than 5 to 15 matching card sets are out at a time unless your students are advanced. You do not want to overwhelm your students.)
- Feel free to come up with your own games for your students or allow them to be creative and make up games for themselves.
